Regenerative medicine cases using adult stem cells are available at www.AutologousAdultStemCells.org

BOSTON, Apr. 18, 2008—Ronald Trahan Associates (“RTA”) Inc. announced today the availability of several podcasts at www.AutologousAdultStemCells.org that show how clinicians and researchers from around the world are using autologous adult stem cells to treat **cardiovascular**, **orthopedic** and **vascular** indications at a patient’s point-of-care.

With last night’s airing on “Nightline” of the use of adult stem cells for difficult orthopedic procedures coming on the heels of a recently announced \$250 million federal government initiative to fund adult stem cell therapies for treating injured troops returning from Iraq and Afghanistan, the public’s interest in these important cells is high.

Until recently, it has been difficult to *process and concentrate* a clinically significant dose of adult stem cells from a patient’s own bone marrow *at the point-of-care*. The podcasts discuss how physicians are making use of new technology to overcome this hurdle.

Since 1992, Ronald Trahan Associates (“RTA”) Inc. has been providing public relations and investor relations counsel and services to big and small companies, both public and private, in the Life Sciences industry.
